Admissible maps, intersection results, coincidence theorems

Comment.Math.Univ.Carolinae 42,4 (2001) 753-762.

Abstract: We obtain generalizations of the Fan's matching theorem for an open (or closed) covering related to an admissible map. Each of these is restated as a KKM theorem. Finally, applications concerning coincidence theorems and section results are given.

Keywords: acyclic map, convex space, matching theorem, coincidence theorem
