On a question of E.A. Michael

Comment.Math.Univ.Carolinae 45,4 (2004) 735-737.

Abstract: A negative answer to a question of E.A. Michael is given: A convex G_δ -subset Y of a Hilbert space is constructed together with a l.s.c. map $Y \rightarrow Y$ having closed convex values and no continuous selection.

Keywords: l.s.c. map, selection, space of probability measures

AMS Subject Classification: 54C65
