Observations on spaces with zerset or regular G_δ -diagonals

Comment.Math.Univ.Carolinae 46,3 (2005) 469-473.

Abstract: We show that if X^2 has countable extent and X has a zerset diagonal then X is submetrizable. We also make a couple of observations regarding spaces with a regular G_δ -diagonal.

Keywords: zerset diagonal, regular G_δ -diagonal, submetrizable, countable extent
