*On the boundary of 2-dimensional ideal polyhedra*

Comment.Math.Univ.Carolin. 47,2 (2006) 359-367.

**Abstract:** It is proved that for every two points in the visual boundary of the universal covering of a 2-dimensional ideal polyhedron, there is an infinity of paths joining them.

**Keywords:** CAT( $-1$ ) spaces, ideal polyhedron, visual boundary

**AMS Subject Classification:** 57M20 (53C23)
