*Quasilinear degenerate elliptic variational inequalities with discontinuous coefficients*

Comment.Math.Univ.Carolinae 34,1 (1993) 55-61.

**Abstract:** We obtain an existence theorem for the problem (0.1) where the coefficients  $a_{ij}(x, s)$  satisfy a degenerate ellipticity condition and hypotheses weaker than the continuity with respect to the variable  $s$ .

**Keywords:** degenerate elliptic variational inequalities, pseudomonotone operators

**AMS Subject Classification:** 35J85, 35J70
