Selfduality of the system of convex subsets of a partially ordered set

Comment.Math.Univ.Carolinae 34,3 (1993) 593-595.

Abstract: For a partially ordered set P let us denote by CoP the system of all convex subsets of P. It is found the necessary and sufficient condition (concerning P) under which CoP (as a partially ordered set) is selfdual.

Keywords: partially ordered set, convex subset, selfduality
