*Group conjugation has non-trivial LD-identities*

Comment.Math.Univ.Carolinae 35,2 (1994) 219-222.

**Abstract:** We show that group conjugation generates a proper subvariety of left distributive idempotent groupoids. This subvariety coincides with the variety generated by all cancellative left distributive groupoids.

**Keywords:** left distributivity, free group

**AMS Subject Classification:** 20N02, 20A99
