*Normal integrands and related classes of functions*

Comment.Math.Univ.Carolinae 36,4 (1995) 775-781.

**Abstract:** Let  $D \subset T \times X$ , where  $T$  is a measurable space, and  $X$  a topological space. We study inclusions between three classes of extended real-valued functions on  $D$  which are upper semicontinuous in  $x$  and satisfy some measurability conditions.

**Keywords:** normal integrand, Carathéodory function
