A short note on separable frames

Comment.Math.Univ.Carolinae 37,2 (1996) 375-377.

Abstract: Following the introduction of separability in frames ([2]) we investigate further properties of this notion and establish some consequences of the Urysohn metrization theorem for frames that are frame counterparts of corresponding results in spaces. In particular we also show that regular subframes of compact metrizable frames are metrizable.

Keywords: separable, metrizable, frame
