An elementary proof of a theorem on sublattices of finite codimension

Comment.Math.Univ.Carolinae 39,1 (1998) 99-100.

Abstract: This paper presents an elementary proof and a generalization of a theorem due to Abramovich and Lipecki, concerning the nonexistence of closed linear sublattices of finite codimension in nonatomic locally solid linear lattices with the Lebesgue property.

Keywords: linear lattice, Lebesgue property, lattice homomorphism
